

Dictionary function

Num

Format method

short Format method

print()

```
In [3]: num1 = 20
num2 = 30
add= num1+num2
print(add)
```

50

```
In [7]: num1 = 20
num2 = 30
add= num1 + num2
print('The addition of',num1,'and',num2,'is=',add)
```

The addition of 20 and 30 is= 50

```
In [8]: num1 = 20
num2 = 30
num3= 50
add= num1 + num2+num3
print('The addition of',num1,'and',num2,'and',num3,'is=',add)
```

The addition of 20 and 30 and 50 is= 100

```
In [10]: name = 'Azim'
city = 'Hyd'
ID = 106
print('My name is',name,'and i am from',city,'my id no.is',ID)
```

My name is Azim and i am from Hyd my id no.is 106

```
In [11]: num1 = 20      # Format methode
num2 = 30
add= num1 + num2
print('The addition of {} and {} is= {}'.format(num1,num2,add))
```

The addition of 20 and 30 is= 50

```
In [12]: num1 = 20      # It is most short format methode that is always prefered.
num2 = 30
add= num1 + num2
print(f'The addition of {num1} and {num2} is= {add}')
```

The addition of 20 and 30 is= 50

```
In [14]: print('Hello Team')      # 1st statement  
         print('Good Morning')   # 2nd statement
```

Hello Team
Good Morning

```
In [15]: print('Hello Team',end = ' ')  # 1st statement  
         print('Good Morning')         # 2nd statement
```

Hello Team Good Morning

```
In [16]: print('Hello Team',end = '****')  # 1st statement  
         print('Good Morning')            # 2nd statement
```

Hello Team****Good Morning
